

What Crisis? — Interactive Portions

Updated 4 September 2026. Visitor-facing clicks, keys, and collisions. Debug URL flags are listed last.

1. Site map

Page	File	How you get there
Home	index.html	Start, or return from player / gallery / last page
Player	player.html	Click the home portal (popup on desktop, overlay on touch)
Street game + lab	on index.html	Click the headed man on the home artwork
Gallery star	julian.html	Click the lab porthole video once the machine is on
Artwork still	julian.html?art=...	Click an Object on the star, or the Object on the player
Class photo / last page	well.html	Click the artwork still
Unlock	unlock.html	Code entry (used when access mode is not FULL)

2. Home — index.html

Artwork: `assets/background.png`. Soundtrack: `audio/homer.mp3`. Portal film is muted.

- **Portal hotspot** (center of the painted Object, about 55.9% / 70.0%, 13.2% wide) — opens the music player. First click on the page also unlocks home audio if the browser blocked it.
- **Headed-man hotspot** (about 41% / 58%, 10% × 28%) — opens the hidden street game. Invisible unless `?game-debug`.
- **Player overlay chrome** (touch / coarse pointer only) — click the dimmed edge or press Escape to close the in-page player and restore home audio.

3. Player — player.html

Background: `assets/player-background.png`. Page soundtrack: `audio/git_jules.mp3` (same file as the last beat of the class-photo ending). Object interiors stay muted. Separate song files per listing will be wired later.

- **Object / interior** — opens that track's artwork in the gallery (`julian.html?art=track-...`).
- **Home** — returns to the homepage (closes the overlay if the player is inside home).
- **Media** — placeholder; does nothing yet.
- **Track One–Track Eight** — selects that listing; changes the muted Object interior only.
- **Previous / Play / Next** — steps listings and starts or pauses *git jules*.

4. Hidden street game

Soundtrack: `audio/Game.mp3`. Prompt: “Can one truly reach the object of one's desire?”

- **Move** — arrow keys or WASD, or drag on the canvas.
- **Throw briefcase** — Space, or tap/click without dragging. Hits headless walkers.

- **Escape** — leaves the game and restores home audio.
- **Reach the Object** at the top of the street — enters the lab.
- **Death** — cars, headless walkers, or saucers. Fireball, then two stills, then respawn in the street.

5. Lab (on the same page)

Soundtrack off: `audio/Lab1.mp3`. Soundtrack on: `audio/Lab 2.mp3`. Porthole film is muted.

- **Knob** — toggles the machine on and off (light, gauge, porthole video, lab-on audio).
- **Porthole video** — only when the machine is on; opens the gallery star.

6. Gallery star — `julian.html`

Background: `assets/Gallery.png`. Soundtrack: `audio/git jules.mp3`. Eight Objects sit on the star arms; interiors are muted loops.

- **Each Object** (Track One through Track Eight) — opens that track's full Julian drawing on black.

7. Artwork still — `julian.html?art=`

- **Click the drawing** — goes to the class-photo page (`well.html`).
- Browser Back returns to the star.

8. Class photo / last page — `well.html`

Opens on the class photograph. Soundtrack: `audio/Lab 2.mp3` until the ending Object. The other Object heads are not clickable.

- **Julian's dad** (bottom row, second from right; hotspot about 67.2% / 43.4%) — starts the cinematic if it has not already begun. The sequence also starts on its own after a short hold.
- Sequence (watch, not click): dad zoom → red/black mask → moon still → moon zoom → last still with "Sated yet???" then "Hungry Ghost???" → fade to black.
- **Ending Object** on the gallery star-field, playing `videos/portal.mov` with its own soundtrack (4 loops, then slow / distorted wind-down, then `git jules` for 7 loops, then home).
- **Click the Object / portal video** — skips the rest and returns home immediately.

9. Unlock — `unlock.html`

- **Code field + submit** — if accepted, marks this browser unlocked and sends you home. Unused while site access is set to FULL.

10. Audio (one page at a time)

Surface	Assigned sound
Home	<code>homer.mp3</code> (portal video silent)
Street game	<code>Game.mp3</code>

Lab off / on	Lab1.mp3 / Lab 2.mp3 (porthole silent)
Player	git jules.mp3 for now; per-song files later
Gallery + artwork	git jules.mp3 (Object interiors silent)
Class photo	Lab 2.mp3
Ending Object	portal.mov soundtrack, then git jules.mp3

11. Developer-only (not for visitors)

These add on-screen alignment sliders. Do not treat them as part of the piece.

- ?portal-debug — home portal window
- ?game-debug — headed-man hotspot outline
- ?video-debug — player Object window
- ?gallery-debug — star Object size
- ?well-debug — dad hotspot outline
- ?lab — skip the street and open the lab
